SUMMARY

Backend engineer. Fintech + e-commerce. Ship code, fix bugs, automate ops. Looking for roles in e-commerce, fintech or B2B SaaS.

EXPERIENCE

Software Engineer Sinaptia Jul 2025 - Present

Backend contractor at **Quiltt**, a fintech unified API platform connecting companies to multiple financial data aggregators (MX, Plaid, Finicity) through a single integration.

- Developed new platform functionality, including manual transaction refresh triggers, extending data sync capabilities for client accounts.
- Built backend features and automation tooling with Ruby on Rails including AI integrations into support workflows, reducing manual work across internal and support operations.
- Led client-facing escalations with data aggregator partners MX and Finicity, resolving misclassified data without disrupting client operations.
- Provided technical support to client developer teams integrating with the platform's GraphQL API, resolving integration issues directly with their engineers.
- Restructured the documentation site's content based on customer feedback and AI-parsing gaps, improving how both users and AI tools navigate it.
- Triage and resolve production bugs across the platform, from investigation through deployment.

Backend Engineer Vaypol Aug 2024 - May 2025

Online sporting goods retailer (footwear and apparel) serving Argentina, with integrated physical branch network.

- Rebuilt the in-store digital signage system running on Raspberry Pi devices, eliminating slow load times and connecting it directly to the back office so the marketing team could push updates themselves in real time.
- Automated shipment tracking by integrating major logistics provider APIs, cutting down manual order-handling work.
- Improved performance and closed security gaps on the company's core e-commerce platform, reducing risk exposure across customer-facing systems.
- Improved AWS cloud monitoring for the platform, improving operational visibility and uptime.
- Diagnosed and resolved recurring data integrity bugs causing incorrect order and inventory records, improving the reliability of core commerce data.

Full Stack Developer Freelance Mar 2022 - Mar 2023

Independent contractor delivering custom e-commerce solutions for small business clients.

- Delivered custom e-commerce web applications end-to-end using React, Ruby on Rails, and Node.js, with PostgreSQL/MySQL databases and JWT/OAuth authentication.
- Integrated Payway and MercadoPago payment gateways into client storefronts, enabling live checkout and order processing in production.

EDUCATION

Software Development Technician 2026

Manuel Belgrano Institute

Mendoza, Argentina

Industrial Engineering

UNTDF

2020 - 2023 (incomplete)

Tierra del Fuego, Argentina

Skills

Programming Languages:  Ruby,  Java,  JavaScript /  TypeScript,  Python,  Bash
